

Astellas North American Headquarters

Glenview, Illinois

LEED™ SILVER

The Hill Group is installing the heating, ventilation and air conditioning in the two seven-story office towers totaling over 400,000 square feet for this pharmaceutical company. A 10,000 square foot lobby connects the two buildings. The project includes a 500,000 square foot parking structure.

The mechanical system utilizes two 300-ton roof mounted VAV heat pump units piped to a 600-ton geothermal well field and two 300-ton roof mounted air conditioning units with evaporative condensers.

The project will make full use of Hill's Building Information Modeling (BIM) capabilities including prefabbing to the fullest extent possible.
